Pima	+568	Pinal	+329	Santa Cruz	+189	Yavapai	+71	Yuma	+222

By understanding how coronavirus spreads, you can take the right steps, so you don't get sick and infect others. Experts believe the virus that causes COVID-19 spreads mainly from person to person. There are several ways this can happen:

The virus is thought to spread mainly from person-to-person.

- Between people who are in close contact with one another (within about 6 feet).
- Through respiratory droplets produced when an infected person coughs, sneezes, or talks.
- These droplets can land in the mouths or noses of people who are nearby or possibly be inhaled into the lungs.
- COVID-19 may be spread by people who are not showing symptoms.

The best way to prevent illness is to avoid being exposed to this virus. You can take steps to slow the spread.

- Maintain good social distance (about 6 feet). This is very important in preventing the spread of COVID.
- Wash your hands often with soap and water. If soap and water are not available, use a hand sanitizer that contains at least 60% alcohol.
- Routinely clean and disinfect frequently touched surfaces.
- Cover your mouth and nose with a cloth face covering when around others.
