May 6th Update - Yavapai County Community Health Services Yavapai County has 150 COVID-19 Cases

Apache	612	Coconino	588	Cochise	40	Graham	19	Greenlee	2
Gila	15	La Paz	18	Maricopa	5,138	Mohave	150	Navaio	892
Pima	1,425	Pinal	497	Santa Cruz	37	Yavapai	150	Yuma	134

91,737 Arizonans have been tested for COVID-19 with **9,707** positive cases and **426** deaths. Yavapai County has tested **3,227** residents, **150** positives, **11** recovered, and **2** deaths. Ten additional cases were reported after 6 p.m. last night.

The YCCHS Epidemiologist and Public Health Nurses continue to critically assess test data, provide contact tracing, and address outbreaks. There is continued testing of students and staff onsite at Mingus Mountain Academy today, and a large order of personal protective equipment was filled by the Emergency Operations Center and picked up yesterday. YCCHS is thankful to YRMC and Spectrum Healthcare in stepping up to assist with rapid testing at the academy and the County Jail.

VVMC reports **no** hospitalization from COVID-19, and **5** persons under investigation (PUI) as of yesterday afternoon. YRMC reports **1** hospitalization with COVID-19, with **5** PUIs on West Campus, **4** on the East Campus. The VA has no COVID-19 hospitalizations or PUIs.

What is contact tracing? Contact tracing tracks down anyone who might have been infected by a person who was recently diagnosed so those contacts can quarantine themselves and prevent further spread. Public health staff work with a patient to help them recall everyone with whom they have had close contact during the timeframe while they may have been infectious. Contacts are provided with education, information, and support to understand their risk, what they should do to separate themselves from others who are not exposed, monitor themselves for illness, and the possibility that they could spread the infection to others even if they themselves do not feel ill. To protect patient privacy, contacts are only informed that they may have been exposed to a patient with the infection," the CDC says. "They are not told the identity of the patient who may have exposed them."
