Pima	+729	Pinal	+343	Santa Cruz	+40	Yavapai	+84	Yuma	+264

From Associated Press: Pfizer says COVID-19 Vaccine may be 90% Effective

The early results from Pfizer's coronavirus vaccine suggests it may be 90% effective at preventing COVID-19, which puts the company on track to apply later this month for emergency-use approval from the Food and Drug Administration.

Dr. Anthony Fauci, the U.S. government's top-infectious disease expert, said the results suggesting 90% effectiveness are "just extraordinary," adding: "Not very many people expected it would be as high as that."

Scientists have warned for months that any COVID-19 shot may be only as good as flu vaccines, which are about 50% effective and require yearly immunizations. Earlier this year, Fauci said he would be happy with a COVID-19 vaccine that was 60% effective.

Daily change of new cases in Arizona as of 11/8/2020

Dr. Bruce Aylward, the World Health Organization's senior adviser, said that Pfizer's vaccine could "fundamentally change the direction of this crisis" by March, when the U.N. agency hopes to start vaccinating high-risk groups.
